High-grade, rectangular washbowls of solid surface material are distinguished by the full range of positive features characteristic for the bowls of the **lavanto®** bowl series. Due to their modern design and their hygienic properties, these bowls can be used in various businesses such as hotels or hospitals. Of course, use in the private sector is also possible.

Each bowl is manufactured on commission – therefore, the colour can be chosen from a large range of colours and minor changes in detail do not pose a problem.
